H 3.7 @ 3:58a · L 3.2 @ 7:55a · H 4.9 @ 1:48p · L 0.0 @ 9:33p · obs 5.2 @ 5:48a

**Rest day. If you go anyway, Little Point 8 to about 10a on the Anvil twin.** Clocks fell back overnight, so all times are standard time. Table tides: H 3.7 @ 3:58a, L 3.2 @ 7:55a, H 4.9 @ 1:48p, L 0.0 @ 9:33p. The gauge read 5.2 ft at 5:48a, about 1.8 ft over the table, so the 1:48p high will be near 6.7 ft. LJAC1 was ENE 2 kt (gust 4) at 5a. NWS hourly has W to NW 5 mph with rain through 9a, then W 10 mph at 10a and NW 15 mph from noon to 5p, with showers possible until about 3p. PZZ740 has NW 10 to 15 kt with gusts to 20 offshore today.

# Where it's working

## Rest day · Little Point if you go anyway

★

The surf itself is good. The SSW groundswell holds at SwH 0.9–1.1 m (3.0–3.6 ft) at 13 to 17 seconds from 195–212° (46258), and the SRF has 3 to 6 ft on mixed 210° and 290° swell. But NWS has steady rain (84%) through 9a, and rain on the streets means runoff in the lineup, so the smart play is to stay dry. If you go anyway, Little Point after the 7:55a low: the gauge runs about 1.8 ft over the table, so the reef sits in its 3 to 5.5 ft band on the push from about 8 until about 10. Scorecard at 8:30a with NW 4 kt: Little Point 0.98.

CALL

2

### PB Drive

Score 0.97 right now and 0.98 at 8:30a. Same swell, same rain. Fine until NW fills in near 10a.

ALSO OK

3

### Blacks (extended)

Score 0.92 off 46225 (SwH 3.3 ft @ 14s SSW), but it does not clear the drive margin today, and a hike down a wet cliff trail in the rain is not worth it. Monday looks like its day.

NOT TODAY

•

Skip · Calumet (0.77), PB north (0.72), Tourmaline (0.64) and PB Point (0.34). The gauge-high tide is too full for the low-tide spots, and everything blows out once NW 10–15 mph arrives late morning. The Cliffs and OB sit near storm drain and river outlets, the worst places on a rain day.

SKIP

BOARD

## Anvil twin

~75°F

QUIVER

### Anvil twin fish

Only if you paddle out. It is the punchiest board you own for steep Little Point sets until the thruster lands.

TW log · too much swell for it today

'IKE · ONE THING TO REMEMBER

## Rain washes the street into the sea.

Storm drains are not filtered. The first rain after a dry spell flushes oil, trash and bacteria straight to the beach, and it is worst near creek mouths and drain outlets. County health guidance is to give the ocean 72 hours after rain. Good waves will be back this week; ear and sinus infections take longer.

## SKIP

Everything on the morning rain, for water quality. Little Point before the 7:55a low (falling tide) and after about 10a (gauge tide above 5.5 ft). All spots once NW 10 to 15 mph fills in. The Cliffs, OB and anything near a creek or storm drain outlet. Blacks today.

## GOTCHAS

Runoff: county health guidance is to stay out of the ocean for 72 hours after rain, longest near storm drains, creek mouths and lagoon outlets, and today counts as a rain day. High rip current risk today (NWS SRF). The gauge is running 1.8 ft over the table, so the early-afternoon high is near 6.7 ft with wet beach access. Little Point has rocks on the inside and a tight takeoff.
