H 6.0 @ 8:33a · L -0.4 @ 3:54p · H 3.5 @ 10:26p · obs 5.4 @ 5:42a

PB north of pier from about 9:30 to 11:30a on the Anvil twin, sitting inside; PB Point also fine around 11:30a to 12:30p as it drains. Table tides: H 6.0 @ 8:33a, L –0.4 @ 3:54p, H 3.5 @ 10:26p. The gauge read 5.41 ft at 5:42a against a 4.26 ft prediction, about 1.1 ft over the table (SRF says 1.2 to 1.4 ft; coastal flood advisory through noon today), so the high lands near 7.1 ft real and is swampy. LJAC1 was E about 6 kt at 5:18a. NWS hourly has E 5 mph at 5–7a, calm at 8–10a, W 5 at 11a, NW 5 at noon and NW 10 from 1p. PZZ740 calls variable under 10 kt becoming NW 10 kt this afternoon.

Where it's working

PB north of pier · 9:30–11:30a

LOCAL and BEST (single hero). 46258 SwH 1.4 m (4.6 ft) at 12.5s WNW 282° (overnight 1.3–1.4 m at 14–15s W) plus a W windsea about 2.6 ft at 10s, and NWS SRF 3 to 6 ft with sets to 7 and HIGH rips. That is a bit bigger than yesterday on the buoy and above your comfort zone on the sets; the bigger waves are beyond the fish. Pier north is the softer home sandbar, so sit inside and pick the medium ones. Glassy: LJAC1 E 6 kt at 5:18a, NWS calm 8–10a, W 5 mph at 11a, NW 10 mph from 1p. Scorecard 0.98 live and leads LOCAL through noon.

CALL

Also fine · PB Point ~11:30a–12:30p

As the very full 8:33a high drains, PB Point lines up (scorecard 0.86 at noon), before the NW wind arrives around 1p.

ALSO OK

Blacks · close on score, skip without a thruster

Scorecard 0.95–0.97 late morning (46225 SwH 3.6 ft at 13s W), short of the +0.05 drive margin. On a 4.6 ft WNW swell the canyon is well overhead, which is thruster territory and none in the quiver. Stay home.

NOTE

Skip · anything before about 9:30a on the swampy high, Little Point (drowned, then falling), open-beach Drive closeouts on the bigger sets, and the drained, windy low after about 1p.

SKIP

BOARD

Anvil twin

~75°F

QUIVER

Anvil twin fish

Glassy pier-north sandbar is still Anvil territory if you sit inside and skip the big sets. The 7 ft sets and overhead Blacks want a thruster you do not own yet.

TW log · too much size and rip today

'IKE · ONE THING TO REMEMBER

Why the period number on the buoy can jump around.

The buoy reports the period of the single strongest band of energy. Overnight that was the 15 second W groundswell; at dawn a 12 second band took over as the swell filled in a little. Two nearby periods mixed together make sets that arrive in uneven groups, so count a few sets before you paddle for the peak and wait inside during the long lulls.

SKIP

The swampy early high tide everywhere. Little Point (drowned early, falling later). Open-beach Drive closeouts on the bigger sets. Blacks without a thruster (overhead, beyond the fish). The windy, draining afternoon after about 1p.

GOTCHAS

Size: SRF 3 to 6 ft with sets to 7 on mixed 290° and 210° swell, and the buoy groundswell ticked up to 4.6 ft overnight, so this is above your comfort zone on the sets and the bigger waves are beyond the fish on the Anvil. Sit inside, take the medium ones, and give the set waves room. HIGH rip current risk plus a Beach Hazards Statement through 10p tonight (NWS SRF). King-tide pattern: the La Jolla gauge is running about 1.1 ft over predictions with a coastal flood advisory through noon, so the beach is narrow and backwashy near the high and the drain to a −0.4 low is fast. Period dropped from 15s to 12.5s around dawn with a 10s windsea on top, so expect it a bit shifty. Blacks: hike, shorebreak, canyon crowds, thruster territory.
