take the medium ones

H 5.8 @ 9:01a | L -0.2 @ 4:32p | H 3.3 @ 11:15p | obs 5.3 @ 5:54a

PB north of pier from about 9:30 to 11:30a on the Anvil twin; PB Point or Tourmaline also fine around noon as it drains. Table tides: H 5.8 @ 9:01a, L –0.2 @ 4:32p, H 3.3 @ 11:15p. The gauge read 5.25 ft at 5:54a against a 4.06 ft prediction, about 1.2 ft over the table (SRF says 1.2 to 1.4 ft), so the high lands near 7.0 ft real and is swampy. LJAC1 was SE about 2 kt at 5:18a. NWS hourly has NE 5 mph at 6–7a, calm at 8–10a, NW 5 at 11a–noon, NW 10 from 1p and W 10 from 3p. PZZ740 calls variable under 10 kt becoming W 10 kt this afternoon.

Where it's working

PB north of pier · 9:30–11:30a

★

LOCAL and BEST (single hero). 46258 SwH 0.9 m (3.0 ft) at 14.3s W 275° plus a W windsea about 2.3 ft at 8s, and NWS SRF 3 to 5 ft with sets to 6 and HIGH rips. A step down from yesterday, so the average waves are back in your range and only the sets brush your ceiling. Glassy: LJAC1 SE 2 kt at 5:18a, NWS calm 8–10a, NW 5 mph 11a–noon, NW 10 from 1p. Scorecard 0.98 live and leads LOCAL 9a through noon.

CALL

- **Also fine · PB Point or Tourmaline ~noon–1p**
  As the very full 9:01a high drains, PB Point (0.79) and Tourmaline (0.71) come in around noon, before the NW 10 mph wind at about 1p. Tourmaline is the softer option.
  ALSO OK

- **If you have 3 hours · Blacks**
  Scorecard 0.95–0.98 from 10a to noon (46225 SwH 2.6 ft at 13s WSW), a tie with PB north and short of the +0.05 drive margin. Chest to head high and glassy, so the Anvil works there; only worth it if you want the drive and hike.
  NOTE

- Skip · anything before about 9:30a on the swampy high, Little Point (drowned until about noon, then falling), Birdrock (W swell blocked), and the windy, draining afternoon after about 1p.
  SKIP

BOARD

QUIVER

Anvil twin fish

Glassy pier-north sandbar at chest to head high is Anvil territory for speed through the flats. Sit a touch deeper on the sets and let the biggest ones go.

TW log · too much size and rip today

'IKE · ONE THING TO REMEMBER

Why a king tide eats the morning.

Around the new moon the sun and moon pull together, so highs run extra high and lows extra low. This week the La Jolla gauge is also reading about a foot over the table, so a 5.8 ft high behaves like 7 ft. Waves then break late and straight onto the sand. As the tide drops toward mid, the sandbars come back into play, which is why the window opens around nine thirty.

SKIP

The swampy early high tide everywhere. Little Point (drowned by the surge until about noon, then falling). Birdrock (W swell blocked). The windy, draining afternoon after about 1p.

GOTCHAS

Size: SRF 3 to 5 ft with sets to 6 on mixed 210° and 290° swell, and the buoy groundswell is 3.0 ft at 14s, so the average waves are in your range but the sets are near your ceiling on the Anvil. Let the biggest ones go. HIGH rip current risk (NWS SRF). King-tide pattern: the La Jolla gauge is running about 1.2 ft over predictions, so the beach is narrow and backwashy near the high and the drain toward a −0.2 low is fast. A W 8s windsea sits on top of the groundswell, so sets come in uneven groups. Blacks: hike, shorebreak, canyon crowds.
