11:00a	GO · Little Point, light wind	3.6 ft tide	W ~4 kt · NWS	2–4 ft (SRF), S 15–17s + W 7–8s windswell

L 0.8 @ 2:01a · H 5.7 @ 8:16a · L 0.1 @ 2:47p · H 4.6 @ 8:52p · obs 5.5 @ 5:48a

Little Point, 10:45a to about 12:30p, on the Anvil twin. Table tides: H 5.7 @ 8:16a, L 0.1 @ 2:47p, H 4.6 @ 8:52p. The gauge read 5.47 ft at 5:48a against 4.03 predicted, so it is running about 1.4 ft over the table for the sixth day. That puts the reef near 7.1 ft at the high, then about 5.1 ft at 11a, 3.7 ft at noon and 3.1 ft at 12:30. LJAC1 was E 9–10 kt (gusts 11) around 4:30–5:00a. NWS hourly has E 5 mph from 6a to 8a, calm 9–10a, W 5 mph at 11a and noon, then W 10 mph from 1p, sunny. PZZ740 has wind variable under 10 kt, becoming W 10 kt this afternoon.

Where it's working

Little Point

★

Top of the scorecard at 0.80. The S groundswell has stretched out to 15–17 seconds (46258 SwH 0.6–0.9 m, 2.0–3.0 ft, SSW 202° overnight) but is thinner than yesterday, with about 4 ft of short W windswell on top. Wind is the good news: LJAC1 is E 9–10 kt offshore at 5a, and NWS has E 5 mph to 8a, calm 9–10a, then W 5 mph at 11a and noon. The gauge read 5.47 ft at 5:48a against 4.03 predicted, about 1.4 ft over the table. That puts the reef near 7.1 ft at the 8:16a high, far over the 5.5 ft ceiling, then about 5.1 ft at 11a, 3.7 ft at noon and the 3.0 ft floor around 12:30. Paddle out by 10:45.

CALL

2

PB Drive

Score 0.67. The sandbar handles the big tide, and the E offshore grooms it at dawn. Long-period closeouts are the risk. Also fine for a dawn session before the reef is ready.

SOFT

3

Calumet

Score 0.59. Swell angle is right but the gauge is far too full for its window. Pass.

SOFT

4

PB north of the pier

Score 0.51. The SSW angle mostly misses the pier wedge.

SOFT

•

Skip · Tourmaline (0.23) and PB Point (0.14) drown on this tide and are undersized. The Cliffs and OB want a real W groundswell; the W energy today is 7–8s windswell. Blacks and Scripps (extended only) would pull in more of the S, but the wind is just as clean at home, so no reason to drive.

SKIP

BOARD

Anvil twin

~72°F

QUIVER

Anvil twin fish

Waist-to-chest faces with the odd bigger set. The twin is the punchiest board you own until the new shortboard shows up.

TW log · too much push on the 16s sets for it

'IKE · ONE THING TO REMEMBER

A longer period means more of the wave is hiding below the surface.

A 16 second swell carries energy deep in the water, so it feels the reef sooner and stands up bigger than the buoy height suggests. The sets also arrive in tight groups with long flat lulls. Count the waves in a set, wait out the lull, and be in position before the next group shows.

SKIP

Little Point before about 10:45a, while the gauge-adjusted tide sits over the 5.5 ft ceiling, and after about 12:30p, when it drains below the 3.0 ft floor. Calumet, Tourmo and PB Point on a gauge this full. The Cliffs and OB on a short-period W windswell. Any drive north, since home is just as clean.

GOTCHAS

Moderate rip current risk (NWS SRF). Long 15–17 second sets come in groups with long lulls, so watch a full set cycle before paddling out. The reef drains fast after noon; do not get caught on the inside at 12:30. A coastal flood warning starts 5a Sunday for the big morning highs, so expect beach access and the PB boardwalk to get wet through Thursday. If yesterday s showers hit the coast, the county advises staying out for about 72 hours near storm drains and creek mouths.
