7:00a	***GO · Little Point, rising off the low, light E***	**3.1 ft tide**	**E ~4 kt offshore · NWS**	**2–4 ft, sets 5 (SRF), SSW 14–15s groundswell + small 10s windswell**

H 3.4 @ 3:39a · L 3.1 @ 6:43a · H 5.4 @ 1:16p · L -0.1 @ 9:22p · obs 4.7 @ 5:48a

Little Point, 7 to about 9:30a, on the Anvil twin. Table tides: H 3.4 @ 3:39a, L 3.1 @ 6:43a, H 5.4 @ 1:16p, L –0.1 @ 9:22p. The gauge read 4.7 ft at 5:48a, about 1.5 ft over the table, so the reef is in range on the push only until about 9:30 to 9:45. LJAC1 was E 7 kt (gust 8) at 5:18a. NWS hourly has E 5 mph 5–8a, SE 5 mph 9a–noon, S then SW 5 mph in the afternoon, and rain showers likely from 5p. PZZ740 has SE 10 kt this morning becoming variable under 10 kt.

Where it's working

Little Point

Scorecard 0.83, docked only because the gauge was still easing into the 6:43a low when it ran. The SSW groundswell is holding at SwH 0.8–1.1 m (2.6–3.6 ft) at 14–15 seconds from 199–215° (46258), a good reef angle, and the SRF has 2 to 4 ft with sets to 5. LJAC1 was E 7 kt (gust 8) at 5:18a, offshore, and NWS has E 5 mph until 8a, then SE. The gauge read 4.7 ft at 5:48a, about 1.5 ft over the table, so after the low the reef sits in its 3 to 5.5 ft band on the push until about 9:30 to 9:45, then drowns toward the 5.4 ft high (near 6.9 ft on the gauge) at 1:16p. Paddle out by 7.

CALL

2 **PB Drive**
Score 0.95, top of the raw list. Same swell, light offshore, fine 7 to about 10:30a before the full tide fattens it.

ALSO OK

3 **PB north of the pier**
Score 0.73. Swell angle scores 0.05 here, so less shape than the Drive.

SOFT

4 **Tourmaline**
Score 0.57. Softer and roomier on the full tide, a backup if the Little Point takeoff is packed.

SOFT

- Skip · Calumet (0.65) and PB Point (0.39) want less water than this. The Cliffs and OB take the angle but are not worth the drive with the home reef on. Blacks and Scripps (extended only) are not worth it either.

SKIP

BOARD

Anvil twin

~75°F

QUIVER

Anvil twin fish

Steep reef sets again, and the Anvil is the punchiest board you own until the thruster lands. Sit a touch deeper and pump less on the bigger ones.

TW log · only if you bail to soft Tourmaline

'IKE · ONE THING TO REMEMBER

A rip is a conveyor belt, not a drain.

Rip risk is high today. A rip pulls you out, never under, and it is usually narrow. If one grabs you, paddle sideways toward the whitewater until it lets go, then ride a wave in. Surfers use the same channel on purpose for an easy paddle out, which is fine as long as you know where it ends.

SKIP

Little Point after about 9:45a, once the gauge-adjusted tide tops 5.5 ft, and the afternoon drain (falling tide on the reef, then showers). Calumet and PB Point on a tide this full. The Cliffs and OB, since the home reef is on. Blacks and Scripps.

GOTCHAS

High rip current risk today and Sunday (NWS SRF), so stay off the channel edges and paddle sideways out of a rip, not against it. The gauge is running 1.5 ft over the table, so the 1:16p high will be near 6.9 ft and wet beach access. Little Point is a tight takeoff with rocks on the inside and crowds fast on a Saturday. Rain showers likely from late afternoon; once it rains, the 72 hour runoff clock starts.
