L 1.0 @ 2:28a | H 6.1 @ 8:43a | L -0.4 @ 3:27p | H 4.4 @ 9:38p | obs 5.2 @ 5:48a

PB Drive, 7 to about 9:30a, on the Anvil twin. Table tides: H 6.1 @ 8:43a, L –0.4 @ 3:27p, H 4.4 @ 9:38p. The gauge read 5.21 ft at 5:48a against 3.78 predicted, so it is running about 1.4 ft over the table for the seventh day. LJAC1 was E 9–10 kt (gusts 11–12) around 5:00–5:20a. NWS hourly has E 5 mph at 6a, calm from 7a to 9a, NW 5 mph at 10a, W 5 mph at 11a and noon, then W to NW 10 mph from 1p, sunny. PZZ740 has wind variable under 10 kt, becoming NW 10 kt this afternoon. If you want a second go, Little Point opens up from about 11:15a to 12:45p on the drain.

Where it's working

★

PB Drive

Top of the scorecard at 0.95. The S groundswell held at 14–15 seconds overnight but slimmed down (46258 SwH 0.5–0.7 m, 1.6–2.3 ft, SSW 202°), with about 2 ft of short W windswell on top. Wind is the reason to go early: LJAC1 is E 9–10 kt offshore at 5a, and NWS has E 5 mph at 6a, then calm 7–9a under sunny skies. The sandbar is the one LOCAL spot that handles the 6.1 ft high at 8:43a, which the gauge pushes closer to 7.5 ft. Expect it a bit fat and backwashy right at the top of the tide. Paddle out by 7.

CALL

2

Little Point

Score 0.83, but flagged undersized for the reef. The gauge read 5.21 ft at 5:48a against 3.78 predicted, about 1.4 ft over the table, so the reef sits above the 5.5 ft ceiling until about 11:15a and drops past the 3.0 ft floor near 12:45p. Also fine for a short late-morning session in W 5 mph wind.

ALSO FINE

3

Calumet

Score 0.62. Swell angle is right but the tide is far too full for its window. Pass.

SOFT

4

PB north of the pier

Score 0.56. The SSW angle mostly misses the pier wedge.

SOFT

•

Skip · Tourmaline (0.48) and PB Point (0.33) go to mush on this tide and are undersized. The Cliffs and OB want a real W groundswell; the W energy today is short windswell. Blacks and Scripps (extended only) would pull in more of the S, but at 2 ft of groundswell it is not worth the drive.

SKIP

BOARD

Anvil twin

~72°F

QUIVER

Anvil twin fish

Waist-high sandbar faces on a full tide. The twin keeps speed through the fat sections.

TW log · fine if it is closer to waist and slow

'IKE · ONE THING TO REMEMBER

A big high tide softens a sandbar.

When the water is deep over the bar, waves feel the bottom late and break slower and fatter, and the backwash off the steep high-tide beach can bounce into them. Sit a little deeper on the outside, and take the waves that are already standing up as they reach the bar.

SKIP

Little Point before about 11:15a, while the gauge-adjusted tide sits over the 5.5 ft ceiling, and after about 12:45p, when it drains below the 3.0 ft floor. Calumet, Tourmo and PB Point on a tide this full. The Cliffs and OB on a short-period W windswell. Any drive north on 2 ft of groundswell.

GOTCHAS

Moderate rip current risk (NWS SRF), and the 7 ft-plus gauge-adjusted high will pull hard along the sandbar. The coastal flood warning runs from 5a today to 1p Thursday, so expect beach access and the PB boardwalk to be wet around the 8:43a high. The 14–15 second sets come in groups with long lulls; watch a full set cycle before paddling out.
