RIDE

Fish / mid

~73°F

'IKE · OCEAN TEACHING

South pulse rides south metro too

A 205° SSW ground pulse with 11s period lights open beach and south-facing sandbars before it wakes strict NW reefs. 46232 (Point Loma South) is online at 3.9 ft @ 12s from 178° — same family as the 9/25 OB Pier session. Light SSE → calm at LJAC1 is soft onshore, not classic NE offshore, but morning glass still holds until the W seabreeze (~4 kt by 10a, ~9 kt noon). Ride mid-high before H 6.0 and before noon texture; do not park the BEST pin only in PB when south metro is in the cone.
