H 3.3 @ 1:54a · L 2.8 @ 5:24a · H 5.9 @ 12:05p · L -0.3 @ 8:05p · obs 4.2 @ 5:48a

Little Point, 7 to about 8:30a, on the Anvil twin. Table tides: H 3.3 @ 1:54a, L 2.8 @ 5:24a, H 5.9 @ 12:05p, L –0.3 @ 8:05p. The gauge read 4.2 ft at 5:48a, about 1.4 ft over the table, so the reef is in range on the push only until about 8:30. LJAC1 was ESE 4 kt (gust 7) at 5:00a. NWS hourly has E 5 mph 6–7a, SE 8a, S 5 mph 9a–1p, S 10 mph at 2p, SW 10 mph at 4p, with a slight chance of light rain all day. PZZ740 has SW 10 kt today.

Where it's working

Little Point

Scorecard 0.98, top of the local list. The SW groundswell grew overnight to SwH 0.8–1.0 m (2.6–3.3 ft) at 14–17 seconds from 194–230° (46258), right in the reef angle, with a small W windswell on top. The SRF has 2 to 4 ft with sets to 5. LJAC1 was ESE 4 kt (gust 7) at 5a and NWS has E 5 mph 6–7a, going SE then S 5 mph. The gauge read 4.2 ft at 5:48a, about 1.4 ft over the table, so the reef sits in its 3 to 5.5 ft band on the push from first light until about 8:30, then drowns toward the 5.9 ft high (near 7.3 ft on the gauge) at 12:05p. Paddle out by 7.

CALL

2 **Tourmaline**
Score 0.96. Same swell on a filling tide, softer and roomier. Fine backup if the Little Point takeoff is packed.

ALSO OK

3 **PB Drive**
Score 0.94. Also fine 7 to about 9:30a with light wind, then it goes fat on the gauge-adjusted high.

ALSO OK

4 **PB north of the pier**
Score 0.86 overall but the swell angle scores 0.55 here. Less shape than the Drive.

SOFT

- Skip · Calumet (0.86) and PB Point (0.60) want less water than this high. The Cliffs and OB take the SW angle but are not worth the drive when the home reef is on. Blacks and Scripps (extended only) are not worth it either.

SKIP

BOARD

Anvil twin

~73°F

QUIVER

Anvil twin fish

Steep reef sets, and with the Inferno gone the Anvil is the punchiest board you own. Sit a touch deeper and pump less on the bigger ones.

TW log · only if you bail to soft Tourmaline

'IKE · ONE THING TO REMEMBER

Read the gauge, not just the table.

The tide table is a prediction. Right now the real water at La Jolla is running about 1.4 ft higher than the table says, so a reef that should work until late morning is drowned by 9. Check the observed level before you pick a window, and on reefs like Little Point, err early.

SKIP

Little Point after about 8:30a, once the gauge-adjusted tide tops 5.5 ft. The afternoon drain is a falling tide on the reef with S to SW wind, so skip it. Calumet and PB Point on a tide this full. The Cliffs and OB, since the home reef is on. Blacks and Scripps.

GOTCHAS

Moderate rip current risk today and high on Saturday (NWS SRF). Coastal flood advisory through 2p, so the 12:05p high (near 7.3 ft on the gauge) will wet beach access. Little Point is a tight takeoff with rocks on the inside; it crowds fast once word gets out. Slight chance of light rain all day; skip the water if it actually rains hard.
